Regenerative Medicine - IRAP, A2M, PRP, BMAC and Stems Cells - ABC Introduction to Veterinary Regenerative Medicine

8pm 11th of May 2022

This lecture is on Regenerative Medicine in Veterinary and Medical Practice - it will explain what constitutes regenerative medicine within veterinary practice. It will discuss Interleukin Receptor Antagonist Proteins, Alpha-2 Macroglobulin, Platelet Rich Plasma, Bone Marrow Aspirate Concentrate, and Different Types of Stem Cells. It will illustrate clinical publications to show the benefits of Regenerative Medicine therapy for veterinary clinics and hospitals post-surgically and for superficial and musculoskeletal rehabilitation and pain management.

These and many other aspects of recent clinical applications of will be reviewed and discussed by Regenerative Therapy Consultant Dr Stephen Barabas, who will explain the principles, present scientific evidence, and answer your questions live.

Demystifying Photobiostimulation – Veterinary Clinical Applications of Modern Laser Therapy – Equine and Small Animals

8pm 24th of May 2022

Controversies around Laser Therapy: learn to recognise the Science from the Marketing claims in this free 1-hour webinar with CPD credits.

What is Photobiostimulation?

What key features allow Photons of Light to Stimulate Biological Tissues?

How can it help Vets, Nurses and Animal Therapists to improve clinical rehabilitation, pain management and general tissue healing?

"Why does our practice need Laser Therapy? We do well without it." (To be Discussed)

"How do I combine Class IV Laser Therapy with Surgery and Medicines?" (to be Discussed)

These and many other common claims about Photobiomodulation will be reviewed and discussed by Laser Therapy Consultant Dr Stephen Barabas, who will explain the principles, present scientific evidence, and answer your questions live.
