

EQUINE VETERINARY SERVICES

2027 REPRODUCTION / STUD MEDICINE INTERNSHIP OPPORTUNITY

SES Equine Veterinary Services is offering a unique internship opportunity for a motivated veterinary graduate with a strong interest in equine reproduction and stud medicine. This fixed-term position runs from February to August 2027 (flexible start and finish dates).

Our practice works with Thoroughbred stud farms in the flat racing industry and has a high-volume artificial breeding caseload which includes chilled and frozen AI, embryo transfer, and OPU. We also provide a problem mare referral service. Interns will gain valuable hands-on experience by shadowing our veterinary team therefore gaining in depth experience across all aspects of equine reproduction and stud medicine.

This is an excellent opportunity to work alongside our experienced team of 4 - 5 vets and 1 nurse in a supportive environment. Interns will assist with all aspects of stud medicine, routine care, and emergency work, and will benefit from mentorship and case discussion.

We value camaraderie, teamwork, and professional development. Interns will be actively involved in the day-to-day running of the practice and will have opportunities to develop clinical skills, participate in research projects, and learn to balance work with a healthy lifestyle.

The practice is located near the Curragh, within easy reach of Dublin and the Wicklow mountains. We assist with finding accommodation to ensure a smooth transition.

This internship is ideally suited to recent graduates who have already completed an internship, who have a keen interest in equine stud medicine and who are eager to gain intensive practical experience in a busy but supportive setting.

To apply for this position please send your CV and cover letter to sesveterinary@gmail.com or apply via our website <https://sesequinevets.ie/>
